

GET (3519TT) Announcements

On July 25, 2014, the DOC of United States announced its affirmative preliminary determinations in the antidumping duty investigations of imports of certain crystalline silicon photovoltaic products from China and Taiwan. To clarify and avoid possible concerns, GET responds as below:

1. GET was not included in the Taiwan investigation for antidumping duty. According to the fact sheet announced, GET is not included in the producers/exporters in Taiwan which received preliminary dumping margin.
2. GET is the upstream & midstream crystalline wafer producer in solar supply chain. GET did not ship merchandise directly to the U.S. market in 2012, 2013, 1H14, and June 2014.
3. The estimated impact of preliminary determinations for antidumping duty to GET is not significant.
4. In response to possible industry volatility, GET plans that:
 - (1) GET production base should be closer to end market. The possibility to set up oversea factory or production line will not be ruled out.
 - (2) To increase cooperation with international customers, expand market share in emerging market, and keep supporting current customers.

Thank you for your attention.
